Can solar farms be built on flat land?

As with most wind power projects, developers only place solar farms on land that meets certain conditions. The land should be sturdy for solar projects and not fall foul to sinking from soft soil. But it's also essential to consider the landscape for a site, as solar projects are particularly reliant on flat land without steep slopes.

Where should a solar farm be built?

Solar farms are normally built on rural land. There needs to be careful thought given as to the suitability of the land chosen for a solar farm. The prime spots for solar farms are either on flat land or on a south facing slope. Ground mounted solar panel systems of greater than 9m sq. (4-5 large solar panels) require planning permission.

Can solar farms be installed on agricultural land?

However, it does not prohibit the siting of solar farms on agricultural land. Solar farms are not evenly distributed across the UK. 43% of ground-mounted installations (that have a capacity of at least one megawatt) that are already operational or are awaiting/under construction are located in the South East and South West of England.

Are solar farms a good idea?

One common criticism of solar plants is that the need for them to occupy large rural sites will lead to a loss of valuable agricultural land. However, planning permission restrictions make it highly unlikely for a solar farm to take the place of high-yield farmland, while their impact on the land itself is generally low and reversible.

Should a site be suitable for a solar farm?

It is the second point, which deals with the quality of the land, and whether a site is suitable for a solar farm at all. In practice, satisfying that requirement means carrying out an assessment to show that there is no lower quality agricultural land where the scheme could be built.

Do you need planning permission for a solar farm?

Ground mounted systems measuring over 9m sq. (approximately 4-5 solar panels) require planning permission and as solar farms are typically built on rural land, they are subject to rigorous planning procedures before you can start harnessing solar power.
