Can solar energy be used to generate electricity?

Yes, the light and heat of the sun, which is solar power, can be used to generate electricity. And it's this capability which makes it such an attractive prospect as a renewable energy source. But solar energy doesn't exist because of the likes of solar panels.

Are solar panels a good idea?

When you use solar panels, you can still get power provided by the utility company in situations where you can't get enough electricity or don't have any power stored. But the ultimate goal for many is to eliminate the need for fossil fuels entirely, to boot the fossil-fueled utility companies and to live a sun-powered life.

What is a solar panel used in a home?

used in a home. Here are some quick definitions to help you. Solar photovoltaic (PV) systems are made up of several panels. Each panel has many cells made from layers of semi-conducting material, usually silicon. When light shines on material, it creates a flow of electricity. Solar panels don't need direct sunlight and can work on cloudy days.
