Can a generator be used if there's a power outage?

Most people think of generators as a handy little appliance that can be used when there's a power outage, but there's so much more to a generator than emergency use. Maybe you've taken a portable generator camping, or you're planning to live off the grid and are looking into a generator system to power your home for the long haul.

Can a generator go bad?

If a generator has been sitting idle for a few months, the old gas could go bad. To avoid this, be sure to run the machine regularly, drain the gas before using a stored generator, or add a fuel stabilizer for freshness. Most generators follow similar basic steps to safely power on and off a generator.

What happens if a generator is damaged?

Generators are designed for outputting a large amount of power in times of need, but if your generator has been damaged or you use it incorrectly, that electrical output might end up somewhere it shouldn't- potentially hurting you or those around you. Here's some quick tips you need to follow in order to protect against the risk of electrocution.

What are the risks of using a generator?

There are three main safety concerns when dealing with a generator; We'll look at these three hazards in turn and provide the safety information you need to minimise these risks. By far, the most serious danger involved with using a generator is carbon monoxide poisoning (CO).

Should you buy a standby generator?

If you're trying to prepare for a long-lasting emergency or want to live off the grid, a standby generator will fit your needs best. If you want portable power for camping, or an electrical safety net to help you weather brief power outages, then a portable generator would be a better option.

How do you turn off a generator?

Most generators follow similar basic steps to safely power on and off a generator. Before powering a generator on, plug in extension cords. Then add any loads into the extension cord. To turn off the generator, unplug the loads from the cord and then unplug the cord from the generator. When all cords are unplugged, turn off the generator.
