

Causes of PV inverter busbar short circuit

How does a short-circuit affect a PV inverter?

When there is a voltage drop associated with a short-circuit, the PV inverter attempts to extract the same power, by acting as a constant power source. This way, the higher the voltage drop, the higher the fault current injected by the PV inverter should be.

How do PV inverters respond to a fault?

For different fault types, after a brief spike (transient response), the currents of the three PV inverters returned near to the nominal value (steady-state response). Also, the inverters injected steady-state fault current (≈ 1 p.u.) for two cycles until their disconnection.

What happens if a PV inverter fails?

In all cases, the fault is caused at the coupling point of the PV inverter, leading the voltage to zero. In addition, it can be seen that the steady-state fault current of the PV inverters is practically the same for different power factor conditions, i.e., from 1 to 1.1 pu of the pre-fault current (1 pu).

Is a PV inverter a constant power source?

The PV inverter is modelled as a constant power source, however, for fault analysis, the authors assumed the limiting current to be twice the rated current, for the worst-case scenario. The inverter current and voltage are considered in phase for unit power factor operation.

Can a fault current limit a PV inverter?

The technique is developed by combining distance protection and overcurrent protection, and simulation results under different fault conditions show the feasibility of the proposed scheme. According to the authors, the fault current of PV inverters is limited within 1.5 times the rated current in order to avoid damage to the equipment.

Does a PV inverter have a steady-state fault current?

In addition, it can be seen that the steady-state fault current of the PV inverters is practically the same for different power factor conditions, i.e., from 1 to 1.1 pu of the pre-fault current (1 pu). In Bravo, et al. (2015), another inverter model is investigated, and the results are also in agreement with the generic group from Table 4.
