

Cayman Islands eternal new energy

The Ministry of Sustainability & Climate Resiliency and the Energy Policy Council (EPC) are launching a 30-day public consultation to gather feedback from the Cayman Islands community on an updated National Energy Policy (NEP) and Implementation Plan.

Building upon the process developed to draft the 2017 NEP, the updated Policy draws upon inputs from Cayman Islands private and public sector stakeholders, and local and ...

The Cayman Islands, a picturesque paradise known for its stunning beaches and vibrant marine life, faces a daunting challenge: climate change. As a Small Island Developing State, the region is particularly ...

With the final draft of the National Energy Plan about to be released, the Compass examines some of the fault lines in the debate over Cayman's energy future. Getting by on your own supply

Under the updated policy, customers can produce and self-consume up to 20 kilowatts of solar photovoltaic along with battery energy storage. This would assist with reaching the targets set, by fostering active involvement of residents in the transition to renewable energy.

In a press release about the decision to accept the revised and more ambitious plan, drafted under Wayne Panton as the sustainability minister, the Cayman Islands ...

100% of all new vehicle sales and imports will be electric by 2045. The plan also includes more technical policy decisions that are expected to significantly impact the transition to renewable energy, including safeguards to ensure that small businesses participate in solar energy while encouraging innovation:

In a press release about the decision to accept the revised and more ambitious plan, drafted under Wayne Panton as the sustainability minister, the Cayman Islands Government acknowledged that the process needs to move more quickly, especially as it is now targeting 2045 for the transformation to 100% green energy and 70% by 2037.

Building upon the process developed to draft the 2017 NEP, the updated Policy draws upon inputs from Cayman Islands private and public sector stakeholders, and local and foreign experts advising on the current market context of energy sector reform topics, including energy efficiency, renewable energy, and electric vehicles.

The Ministry of Sustainability has emphasized that renewable energy is the way forward for the Cayman Islands. The draft revised National Energy Policy (NEP) sets a target of achieving 100% renewable energy by 2050.

The Cayman Islands, a picturesque paradise known for its stunning beaches and vibrant marine life, faces a daunting challenge: climate change. As a Small Island Developing State, the region is particularly vulnerable to environmental shifts, relying heavily on imported fossil fuels that impact its electricity, water, and transportation sectors.
