

What is Colombia's energy matrix?

This page is part of Global Energy Monitor's Latin America Energy Portal. As of 2020, the key components of Colombia's overall energy matrix were petroleum (38%), natural gas (25%), coal (13%), and hydro (12%).

What is Colombia's energy policy?

Since August 2022, Colombia's energy policy under President Gustavo Petro has called for increased development of renewable energy sources and reduced economic dependence on fossil fuels. The MME (Ministerio de Minas y Energí[a](#)), formed in 1974, oversees Colombia's mining industry, mineral industry, and electricity sector.

Why does Colombia have a poor energy sector?

Lack of accountability in the Colombian energy sector allows for problematic outcomes. The gaseous nature of coal deposits in Colombia has caused a large number of occupational accidents and deaths. Poor ventilation, poor worker training, and inadequate regulation are all factors in methane-related accidents.

Is Colombia a good country for hydroelectric power?

With high rainfall rates and a topography favorable for hydroelectric power projects, Colombia has developed hydro as its primary source of electricity, comprising two-thirds of installed capacity and electrical generation in 2020.

Does Colombia's exposure to international markets drive productivity and cost cuts?

"Colombia's exposure to international markets drives improved productivity and cost cuts," Oxford Business Group. June 22, 2017. [80.0 80.1](#) "Environmental Performance Review: Colombia" (PDF). OECD. 2014. [CS1 maint: url-status \(link\)](#)

2 ???&#0183; Colombia wants to shorten the production timeline at its biggest deepwater discovery, the nation's energy chief said, as it braces for a shortfall of natural gas in coming years. State ...

2 ???&#0183; Colombia wants to shorten the production timeline at its biggest deepwater discovery, the nation's energy chief said, as it braces for a shortfall of natural gas in coming years. State-run Ecopetrol SA and Petroleo Brasileiro SA announced this month the Sirius-2 well off the Caribbean coast could triple the country's reserves if the deposit ...

Recorded at CERAWEEK, they discuss the future of Colombia's oil and gas sector, particularly the role shale will play, its energy transition and added renewables to its electricity sector, and the impact of the crisis in neighboring Venezuela on Colombia.

The map displays the resources and energy infrastructure of the region as of 2022. Data is available for

mining, electricity generation capacity, natural gas and oil infrastructure, as well as the vulnerability of these ...

1 ???#0183; The second series of datasets were the Colombian energy balance (BECO in Spanish) which presents information on supply, transformation and final consumption of energy at the ...

Sama Energy offers energy solutions to serve you through its extensive experience in the fields of engineering, procurement, construction (EPC), and operation and maintenance in relation to solar energy, wind energy and water pumps.

1 ???#0183; The second series of datasets were the Colombian energy balance (BECO in Spanish) which presents information on supply, transformation and final consumption of energy at the national level, for each of the energy sources and for each of the sectors that produce, transform or consume energy.

2 ???#0183; Colombia wants to shorten the production timeline at its biggest deepwater discovery, the nation's energy chief said, as it braces for a shortfall of natural gas in coming years.

Sama Energy offers energy solutions to serve you through its extensive experience in the fields of engineering, procurement, construction (EPC), and operation and maintenance in relation to ...

Energy production includes any fossil fuels drilled and mined, which can be burned to produce electricity or used as fuels, as well as energy produced by nuclear fission and renewable ...

Sama Energy is made up of a group of professionals with experience in the energy sector working to assist businesses and businesses across the region to secure the most cost-efficient use of their facilities.

Energy production includes any fossil fuels drilled and mined, which can be burned to produce electricity or used as fuels, as well as energy produced by nuclear fission and renewable power sources such as hydro, wind and solar PV.

The map displays the resources and energy infrastructure of the region as of 2022. Data is available for mining, electricity generation capacity, natural gas and oil infrastructure, as well as the vulnerability of these resources and energy supply infrastructure to climate impacts in the region.
