

Who produces electricity in Romania?

State-owned enterprises such as Nuclearelectrica, Hidroelectrica, Termoelectrica, Hunedoara Energy Complex (CEH), and Oltenia Energy Complex (CEO) are the primary producers of power. According to the National Energy Regulatory Agency (ANRE), the energy output in Romania in 2022 was 53 TWh (terawatt-hour), while imports were 5.9 TWh.

What is the energy sector like in Romania?

Romania's energy sector is key to its evolving economy and security policy. It has a diverse energy mix, including coal, natural gas, nuclear, hydroelectric, and renewable sources. The largest share of electricity production historically came from coal and natural gas, followed by hydroelectric and nuclear power.

What are the different types of energy sources in Romania?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Romania: How much of the country's energy comes from nuclear power?

How does Romania trade energy?

Despite this, Romania trades energy with foreign countries. Along with pure consumption, the production, imports and exports play an important role. Other energy sources, such as natural gas or crude oil are also used. 100.0% of the country's population (as of 2020) has access to electricity.

Where does Romania import electricity?

Romania exports and imports electricity to and from neighboring countries, including Hungary, Bulgaria, Serbia, Ukraine, and Moldova, and is also part of the European Union's internal energy market, which aims to create a single, competitive market for electricity and gas across EU member states.

Is biomass a source of electricity in Romania?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Romania: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

primary energy supply. Energy trade includes all commodities in Chapter 27 of the armonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end

Hydropower plants generated the most electrical energy - 18.6 billion kWh, while the least came from solar power - 1.66 billion kWh. Get notified via email when this statistic is updated.

Energy in Romania describes energy and electricity production, consumption and import in Romania. Romania has significant oil and gas reserves, substantial coal deposits and it has considerable installed hydroelectric power.

Leading companies in the energy industry in Romania 2023, by revenue and net profit; Leading companies in the renewable energy sector in Romania 2023, by revenue & profit

Romania: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

is identified in one of the following intervention fields (i.e. 029 - Renewable energy: solar; 032 - Other renewable energy (including geothermal energy); 033 - Smart Energy Systems ...

renewable energy in different countries and areas. The IRENA statistics team would welcome comments and feedback on its structure and content, which can be sent to

Romania: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Romania's energy policy is focused on minimizing CO 2 emissions by promoting renewable energy sources (RES) and natural gas, augmenting energy usage in transportation, ...

Romania could be self-sufficient with domestically produced energy. The total production of all electric energy producing facilities is 55 bn kWh, which is 110 percent of the country's own usage. Despite this, Romania trades energy with foreign countries.

is identified in one of the following intervention fields (i.e. 029 - Renewable energy: solar; 032 - Other renewable energy (including geothermal energy); 033 - Smart Energy Systems (including smart grids and ICT systems) and related storage.) this amount was deducted from the respective categories (ie renewables and grids).

Romania's energy policy is focused on minimizing CO 2 emissions by promoting renewable energy sources (RES) and natural gas, augmenting energy usage in transportation, and enhancing overall...

This analysis includes a comprehensive Romania energy market report and updated datasets. It is derived from the most recent key economic indicators, supply and demand factors, oil and gas pricing trends and major energy ...

Commercial energy sources Romania

in Romania describes energy and electricity production, consumption and import in Romania. Romania has significant oil and gas reserves, substantial coal deposits and it has considerable installed hydroelectric power. However, Romania imports oil and gas from Russia and other countries. To ease this dependency Romania s...

Romania could be self-sufficient with domestically produced energy. The total production of all electric energy producing facilities is 55 bn kWh, which is 110 percent of the country's own ...

Studies conducted in Romania reveal the potential in green energy production at 65% via biomass, 17% from wind energy, 12% through solar energy, 4% micro hydropower, and 2% geothermal.
