Is Cuba negotiating with Turkish company to double megawatts?

HAVANA, Aug 31 (Reuters) - Cuba, mired in an energy crisis that has brought frequent blackouts, is negotiating with a Turkish company to have it double the megawatts it currently produces for the country from shipboard generators just offshore, according to two people with knowledge of the discussions.

Should Turkey add a powership to its fleet off Cuba?

Experts say the Turkish company would need to add to its fleet off Cuba to produce the required amount of energy. Powerships carry their own generator fueled by oil or gas, anchor close to land and connect to the local electricity grid. They are leased by the host country.

How old are Cuban power plants?

Cuban power plants are obsolete, averaging 35 years of age, with a backup system of hundreds of smaller generators at least 15 years old. Just 5% of power comes from alternative energy sources. The government blames lack of funds for its inability to update its decrepit grid, and says breakdowns, not fuel shortages, are the main cause of blackouts.

How much power does Cuba need?

The company already has five ships operating off Cuba with a capacity of around 250 megawatts (MW). The Communist-run country needs to generate more than 3,000 MW to meet minimum demand and currently is producing between 2,000 MW and 2,500 MW. The Cuban National Electric Union did not respond to a request for comment. Karadeniz declined to comment.
