

Could Greece become a major natural gas provider?

The Alexandropoulis is the first in a series of proposed import terminals that could transform Greece into a major natural gas provider. Gas infrastructure on the island of Revithoussa. A diagram of the Revithoussa terminal near Athens.

Is Greece's energy transition utopian?

Since then, Greece's energy transition has been so swift "it almost feels utopian," one Greek environmentalist said. Mountainous ridgelines and arid islands are covered in wind turbines and solar panels that today provide nearly two-thirds of the nation's electricity.

What role does Greece play in European energy security?

Greece positions itself as central to European energy security, and it plays a key role in the West's strategy to isolate Russia. The real money will be made by American gas companies.

2023 marked a historic milestone in Greece's clean energy production, with 57% of the energy mix being supplied by Renewable Energy Sources (wind and solar) and hydroelectric units, surpassing 25 TWh. In 2022, the corresponding percentage was 50.12%.

In this narrative of energy evolution, Greece holds a unique position. While other nations grapple with scarcity, here, sunlight and wind abound, offering a bountiful source of renewable "fuel." Such abundance hints ...
