

Where does Aruba get its electricity from?

Aruba currently gets 15.4% of its electricity from renewable sources. The island has sufficient renewable energy resource potential, with excellent technical potential for ocean, wind, and solar renewable energy generation.

What is the cost of electricity in Aruba?

The energy landscape of Aruba, an autonomous member of the Kingdom of the Netherlands located off the coast of Venezuela, is outlined in this profile. Aruba's utility rates are approximately \$0.28 per kilowatt-hour (kWh) (below the Caribbean regional average of \$0.33/kWh).

How much energy does Aruba consume annually?

Aruba has an annual consumption of 990 gigawatt-hours (GWh). Currently, about 13% of its generation comes from a 30-MW wind project and 0.9% comes from waste-to-energy (WTE) biogas. An additional renewable capacity of 34 MW is planned or in progress. Aruba's installed generation capacity is 230 megawatts (MW) with an average load of 100 MW.

How much wind capacity does Aruba need?

Aruba's 30-MW wind project at Vader Piet currently produces 13% of Aruba's load requirements, with an additional 26.4 MW slated to come online in late 2015. WEB Aruba aims to add 3 MW to 6 MW to the biogas plant, with a goal of using 70% of household waste. Therefore, Aruba needs more wind capacity to meet its energy demands.

Since May 2023, Aruba has experienced a significant rise in energy demand, driven by economic growth, tourism, and climate change. This increase has placed additional strain on WEB Aruba's existing RECIP engines.

Wärtilä; has been contracted to deliver a 102 MW dual-fuel power plant to the Caribbean island of Aruba. The plant was ordered by the local utility, Water - En Energiebedrijf Aruba N.V. (WEB), to enable it to start transitioning away from HFO.

Aruba is on track to fuel 50 percent of the island's energy needs with wind and solar power by 2014, and is looking to use more natural gas to replace expensive fuel oil. This ...

The international public tender, now open, seeks companies capable of delivering solutions that will advance Aruba's energy market reforms. This move towards price regulation and the reduction of greenhouse gas emissions aligns with the country's commitment to a ...

Aruba is on track to fuel 50 percent of the island's energy needs with wind and solar power by 2014, and is looking to use more natural gas to replace expensive fuel oil. This is especially important in the context of utility prices, which place a huge burden on Aruban households, accounting for 30-35 percent of expenditures.

The global shift toward eco-conscious tourism is clear, and Aruba must act now to keep pace. Streamlining the solar energy approval process is the first and most crucial step.

The benefits of becoming 100% renewable for Aruba include: reducing its heavy dependency on fossil fuel, thus making it less vulnerable to global oil price fluctuations, drastically reducing CO 2 emissions, and preserving its natural environment.
