

What is North Macedonia's energy mix?

North Macedonia's energy mix is dominated by domestic lignite coal-fired units and relies heavily on imports mainly in the form of gas and oil products. Coal is the main source of electricity and accounted for 50% of total generation capacity and 58% of electricity generation in 2019, one of the highest level in Europe.

How does the EU support North Macedonia?

In the period 2014-2020, the EU provided EUR 24.3 million for projects of the civil society organisations in North Macedonia. The Republic of North Macedonia wants to become a member of the EU. To help achieve this goal, the EU provides continuous support and financial assistance via projects so that the country can undertake any necessary reforms.

What is North Macedonia's Energy Strategy?

Integration and security of energy markets: the Strategy is aiming to ensure that North Macedonia is even stronger integrated into European markets, protect today's levels of energy dependence and provide necessary flexibility for higher RES integration.

Who produces electricity in North Macedonia?

The main entity in North Macedonia for electricity production is a state owned company Elektrani na Makedonija (ELEM), with ~70% of the total installed capacity. ELEM is the owner of the two large coal fired thermal power plants, Bitola and Oslomej.

Did North Macedonia change its energy regulations?

There were no major energy legislative changes, but North Macedonia continued to harmonize its energy regulations with the EU Energy Community's Third Energy Package (TEP). North Macedonia's state-owned power company was unbundled and partially privatized in the early 2000s.

How many ktoe is primary energy consumption in North Macedonia?

The projections of primary energy consumption were made by taking the consumption in 2016 energy balance, as a base year, and assuming the annual growth rate of 2.2%. According to that, estimated primary energy consumption in North Macedonia will reach 3,014 ktoe in 2020.
