

Fengjun 7 generator fault code

What does a generator fault code mean?

Some of the most common codes and their meanings include: This fault code indicates that the generator is running at a frequency that is too low. This may be caused by a variety of issues, including low fuel pressure, a clogged fuel filter, or a malfunctioning governor. This fault code indicates that the generator is producing too much voltage.

How does the Kohler Generator fault code list work?

The Kohler generator fault code list works by providing a comprehensive guide to the various error codes that may appear on the generator's control panel. These codes are typically displayed as a combination of letters and numbers and can be easily deciphered by consulting the fault code list.

What does a fault light mean on a generator?

AC Sensing Loss The fault lamp illuminates yellow and the alarm horn sounds when the controller does not detect the nominal generator set AC output voltage after crank disconnect. The controller displays AC Sensing Loss Warning. **Battery Charger Fault** The fault lamp illuminates yellow and the alarm horn sounds when the battery charger malfunctions.

How does the CEM7 control the genset operation?

In automatic mode, the CEM7 constantly controls the operation of a genset. When programmed to supply power in some situations, the controller starts the generator set by activating the genset contactor (programming table parameter 10, 12, and 7).

How do I fix a generator not restarting?

1. Clear the alarm by turning the unit to OFF and pressing the ENTER button twice, then press AUTO.
2. If the unit does not restart, remove some of the loads that the generator is attempting to power then try putting it back in AUTO and attempt to restart.
- 3.

What does AF code mean on a Kohler Generator?

The AF fault code on Kohler generators indicates that the airflow sensor is not working correctly. The airflow sensor controls the air inflow toward the engine and is located between the air filter and the engine. This is a small cylindrical shape sensor, but if this doesn't work correctly, the engine will not start. Faulty air flow sensor.
