

# Homemade Solar Panel Tutorial

How do you build a solar panel?

To build your own solar panel, you'll need to assemble the pieces, connect the cells, build a panel box, wire the panels, seal the box, and then finally mount your completed solar panel. Purchase the cells. There are a few different types of solar cells to buy, and most good options are either made in the United States, China, or Japan.

How do I plan a DIY solar system?

Take a deep breath, it's time to plan your DIY solar system. What do you need electricity for? The first step to any DIY solar panel installation is calculating your electricity demand. For grid-tie home solar panels, take a look at your electricity bills. You can design your system to meet your average monthly kilowatt hour consumption.

What is a DIY solar system guide?

A DIY solar system guide that teaches you everything from basic electrical rules to sizing your solar panels.

How do I choose a battery for a DIY solar panel?

Choosing the capacity for your battery is largely up to your budget, so for this basic DIY solar panel installation, we recommend a 12V solar panel 100 Amp hour (Ahr) battery. For any battery-backed DIY solar panel system, choosing a PWM charge controller, rather than a MPPT, will be less efficient, but more cost effective.

Should you make your own solar panels?

But this tutorial takes some of the fear out of creating your own solar panels. They tell you how to acquire the products you need to put the panels together and also how to get them to work correctly. If you're someone new to the idea of installing solar panels, this should be a great read for you. 2. The DIY Solar Set-Up
