

How long can the face recognition locker be used

Why should police use facial recognition technology?

The guidance also provides a clear legal and ethical framework for its use. Live facial recognition technology supports police to prevent and detect crime and make people safe. It involves using cameras in public or private areas to find passing individuals who are included on police databases.

What is facial recognition technology?

Facial recognition technology refers to algorithmic systems (and the associated hardware) that can analyse a person's face to make a claim of an identity.

What if a person is misidentified by facial recognition software?

Anyone who believe that they have been misidentified by the facial recognition technology or believes that their image has been taken unlawfully should seek legal advice and contact the Information Commissioner's Office. Where does the law stand on the use of facial recognition software?

What is automated facial recognition (LFR)?

Automated recognition implies that a machine-based system is used for the recognition, either for the entire process or assisted by a human being. Live facial recognition (LFR) is the automated one-to-many 'matching' of near real-time video images of individuals with a curated 'watchlist' of facial images.

Are UK police using live facial recognition?

UK police have been using live facial recognition (LFR) technology for the best part of a decade, with the Met being the first force to deploy it at Notting Hill Carnival in 2016. Since then, the use of the biometric surveillance and identification tool by the Met has ramped up considerably.

What do controllers need to know about live facial recognition?

The Information Commissioner's Opinion also highlighted that controllers seeking to deploy Live Facial Recognition must: Comply with all relevant parts of the UK General Data Protection Regulation and Data Protection Act 2018. This includes the data protection principles: Identify a lawful basis and meet its requirements.
