

How to install a household integrated energy storage box

How does a home battery storage system work?

An installer would simply come and fit your domestic battery storage system, adding an AC coupled inverter to communicate between solar PV, the battery, and the home. So, the power from your existing solar array will charge the battery, the battery will supply the home, and any leftover energy is sent back to the grid.

How do I choose a home battery storage system?

Let's start with the battery - the muscle behind your home battery storage system. The size of the battery you install depends on your energy needs. A detached house with five people will likely use more energy than a small 1-bedroom flat with two people. Make sure you do your research before choosing a home battery that's right for you.
