

How does Power-to-X work? The electricity in Power-to-X comes from renewable energy sources such as solar or wind energy. The first step in Power-to-X is to use the electricity in an electrolysis process in which water ( $H_2O$ ) is split into ...

(Budapest, Hungary / Latham, USA) - The Hungarian petrochemical group MOL NyRt. has partnered with U.S. fuel cell manufacturer Plug Power Inc. to build a green fuel production ...

(Székesfehérvár / Hungary) - The Hungarian oil company MOL Group has completed a plant for the production of green hydrogen with an output of ten megawatts in ...

The group operates three refineries and two petrochemical plants in Hungary, Slovakia and Croatia and has a network of almost 2.000 filling stations in ten countries in Central and ...

At the heart of most Power-to-X (PtX) concepts is the utilization of renewable electricity to produce hydrogen through the electrolysis of water.

Power-to-X is the somewhat mysterious name given to plants like Høst in western Denmark that use clean renewable energy sources like offshore wind and solar to perform electrolysis and ...

Power-to-X. What is Power-to-X? Power-to-X (PtX/P2X) is the process of turning electricity (power) into sustainable green products (the "X"). The input to this process is renewable power ...

In particular, we focus on Power-to-Methane, Power-to-Methanol, Power-to-Syngas, and Power-to-Ammonia as they are the key products and/or intermediates of the chemical industry that can be synthesized from hydrogen in one step.

Power-to-X is the somewhat mysterious name given to plants like Høst in western Denmark that use clean renewable energy sources like offshore wind and solar to perform electrolysis and produce ammonia.

In particular, we focus on Power-to-Methane, Power-to-Methanol, Power-to-Syngas, and Power-to-Ammonia as they are the key products and/or intermediates of the ...

(Budapest, Hungary / Latham, USA) - The Hungarian petrochemical group MOL NyRt. has partnered with U.S. fuel cell manufacturer Plug Power Inc. to build a green fuel production facility at the MOL refinery in Székesfehérvár, Hungary.
