Can you put solar panels on a roof?

Ground mounts are more common for certain types of solar systems, like off-grid setups. But they can be used by anyone if they have the space! There are other options if your roof isn't suitable for solar panels; you can also consider a solar carport, a solar patio, or even a solar tree!

Where can a ground-mounted solar panel be installed?

Ground-mounted solar panels can be installed anywhere with good sun exposure and sufficient amounts of open space - a minimum of 350 square feet is usually required. Ground-mounted solar panels are also known as backyard solar panels, free-standing solar panels, and ground-mount PV systems.

Where should a solar farm be built?

Solar farms are normally built on rural land. There needs to be careful thought given as to the suitability of the land chosen for a solar farm. The prime spots for solar farms are either on flat land or on a south facing slope. Ground mounted solar panel systems of greater than 9m sq. (4-5 large solar panels) require planning permission.

Can solar panels be installed on agricultural buildings?

Installing solar panels on the roofs of agricultural buildings is a great way to produce green energy for your farm while cutting costs, providing a reliable energy source, and reducing your carbon footprint. Farming buildings are typically large enough to accommodate a large number of solar panels.

Are ground-mounted solar panels a good alternative to rooftop solar?

Ground-mounted solar panels are a great alternative for customers who want solar - but don't have a roof that's suitable for them. On top of being an alternative to rooftop solar, ground-mounted solar systems can be used on farms, in your garden, and more!

Are rooftop solar panels a good option for a farm?
