What are mounting brackets & rails for solar panels?

Mounting Brackets are the primary components that attach the solar panels to the mounting surface. They come in various types depending on the mounting surface (roof, ground, pole, etc.). Rails: Rails are long, horizontal structures attached to the solar panels using clamps. They provide a stable base for the solar panels.

What type of fixing system is used for solar PV panels?

The type of fixing system used will depend on whether the solar PV panels are going to be: ground mounted. Solar PV panels can be retrofitted onto an existing roof, on top of the tiles or other roofing materials, using roof anchors (also called roof-hooks or brackets), mounting rails and clamps.

How do solar PV roof fixing systems work?

Get more information about solar PV roof fixing systems at the Ecofirst website. Solar PV tracking systems move the PV panels to track the sun, and are claimed to produce up to 30 per cent more electricity than a static array. The downside is the additional cost.

Does solar racking work on a roof?

Proper solar racking safely affixes solar panels to buildings, so your racking system must be compatible with your roof. The essential components of a solar racking system include flashings, mounts, rails, and clamps. The top solar panel racking brands include SnapNrack, Unirac, IronRidge, Quick Mount PV, EcoFasten, and AllEarth Renewables.

Can a solar roof be installed without a hole?

If you have a standing seam metal roof, your installer can use Quick Mount PV and EcoFasten mounting systems to clamp onto the roof's seams without making any holes. Drilling holes in the roof is a time-consuming process that has to be done carefully so your roof remains watertight after installation.

Can solar PV systems be installed on a pitched roof?

The guidelines also say that provision must be made for ventilation behind the solar PV modules to provide cooling. With the introduction of MCS012 in March 2012 we would now expect all MCS certified installers of solar PV systems to install solar PV systems on pitched roofs using only MCS012 certified roof fixings.
