Is it safe to clean solar panels from the ground?

Yes, and it's much safer than attempting to climb a ladder. Here's a step-by-step guide to cleaning your solar panels from the ground: 1. Switch off the entire solar PV system. Your solar PV system manual will tell you how to do this. 2.

Do solar panels need to be cleaned?

Learning how to clean solar panels as well as how to maintain solar panels will go a long way toward extending not only their life but how efficient they are in the long run. Solar panels degrade at a rate of 0.5% every year, and regular solar panel cleanings will do a lot to slow this rate down and extend the life of the solar panel.

Can rainwater clean solar panels?

While rainwater can help to clear off dust, it isn't the best way to clean solar panels. When rainwater evaporates, it can leave rings of dust and debris, which will affect how efficiently the panels produce solar power.

Are portable solar panels better than rigid solar panels?

Easily clean them with a slow stream of water when necessary. Unlike rigid panels, portable solar panels offer you the flexibility of placement and use with the same, if not better solar charging capabilities. While EcoFlow's solar panel portability makes them perfect for camping, you can also use them like rooftop PV panel systems.

Should you hire a professional solar panel cleaning service?

By hiring a professional, you'll know that your solar panel cleaning will be done correctly. To find the right person for the job, ask for a recommendation from others who have solar panels on their property, or do a Google search for "solar panel cleaning service near me" and review the options that come up.

How to clean solar panels?

You won't need any specialist equipment to clean your solar panels. A hose, a soft sponge, and a bucket should be enough to do the job. Pressure washers aren't advisable, as they can easily damage the solar cells. Instead of using soap, spray your panels with diluted white vinegar and then wipe them down with a sponge.

Always check if your solar panel manufacturer and installer have specific cleaning recommendations. While it is unlikely that you could void your solar panel's warranty, it is best to be 100% sure you don't.
