

Japan Solar Power Scam

Does Japan have a problem with solar power?

A Mainichi Shimbun survey found that of all 47 prefectures in Japan, 80% have problems with solar power energy in one way or another. Known as the "sunny land" because of its many fair-weather days, the western Japan prefecture of Okayama is highly suited to solar power generation.

What percentage of Japan's Energy is solar?

In 2022, solar energy accounted for 5.39% of Japan's total energy mix and 9.91% of its electricity generation. In both cases, solar power in Japan holds the largest share of all renewable sources. This is a drastic contrast to even a decade ago when solar energy contributed less than 1% of the country's energy.

Does Japan have a problem with mega solar farms?

Popular opposition appears to be so strong that a 2021 survey by the Mainichi Shimbun found that 80 percent of Japan's 47 prefectures have problems with mega solar farms. Part of the problem lies in Japan's FIT system. Under the scheme, the Japanese government awards long-term contracts to renewable energy producers.

Why is solar power growing in Japan?

The steady growth of solar power in Japan is attributed to several factors, including the country's focus on energy security, economic efficiency and environmental sustainability. Post-Fukushima, there was a national reevaluation of energy sources.

Why do Japanese solar energy companies pay more?

As a result, Japan's solar energy companies -- and other industries serving Suga's "green society" -- face stiff competition for labour and specialists, pushing up pay. For some operators, the change in FITs has pushed them towards other alternative energy sources.

What is a solar energy scam?

The scams vary, but here's the gist: someone claiming to be with the government or your utility company promises big savings on your utility bills from solar energy or other home improvements designed to increase energy efficiency. If you agree to the scammer's offer, it could cost you tens of thousands of dollars.
