What is operation & maintenance (O&M) of photovoltaic (PV) systems?

This guide considers Operation and Maintenance (O&M) of photovoltaic (PV) systems with the goal of reducing the cost of O&M and increasing its effectiveness. Reported O&M costs vary widely, and a more standardized approach to planning and delivering O&M can make costs more predictable.

What should a documented PV system O&M plan include?

A documented PV system O&M plan for a system or fleet of systems should include the following (depending on system size, complexity, and investment): List of responsible-party contact information including site owner and offtaker of power, utility, local jurisdiction, local landowner, as well as emergency numbers.

What guidance is there on the performance of PV systems?

The Good Practice Guide provides some guidance on the performance of PV systems in Section 4 of the updated PV Installers Guide. The PV Specialist should model the system using one of the software simulation programmes available, which have a 'library' of modules and inverters and can select the sunlight conditions most representative of the site.

To whom is the photovoltaic (PV) guide applicable?

This guide is applicable to Clients planning or undertaking installation of Photovoltaic (PV) systems on 'Large Scale' buildings. These buildings are typically owned by organisations from the public or private sector, such as educational establishments, local government, a local community, or commercial organisations.

When should a PV O&M plan be considered?

The PV O&M plan should be considered within the context of the performance period required for a residential or commercial PV system to generate a sufficient return on investment (ROI). The PV O&M life-cycle begins with planning and system design. The life cycle ends with provision for decommissioning or disposal of the system.

How can a solar PV system be monitored?

solar PV system, such as the electricity generated, temperature of key components. This can help identify faults and optimise system performance, by providing an indication of when a system needs investigation by trained and authorised engineers. Monitoring can be performed based on information received at diff
