

Photovoltaic off-grid inverter nameplate

Can a name plate be inside a photovoltaic inverter?

The name plate may be inside the photovoltaic inverter only if the name plate is visible once a door is opened in normal use. This International Standard describes data sheet and name plate information for photovoltaic inverters in grid parallel operation. The object of this standard is to provide minimum information...

What is the international standard for photovoltaic inverters?

This International Standard describes data sheet and name plate information for photovoltaic inverters in grid parallel operation. The object of this standard is to provide minimum information required to configure a safe and optimal system with photovoltaic inverters.

What is a data sheet in a photovoltaic inverter?

In this context, data sheet information is a technical description separate from the photovoltaic inverter. The name plate is a sign of durable construction on or in the photovoltaic inverter. The name plate may be inside the photovoltaic inverter only if the name plate is visible once a door is opened in normal use.

Can I use PV inverters in off-grid systems?

You can use the following PV inverters in off-grid systems. You can order all the listed PV inverters with preset off-grid parameters from SMA Solar Technology AG. The PV inverters must be equipped with at least the firmware version given in the table, or a higher version.

What is the consolidated version of the photovoltaic inverter standard?

The object of this standard is to provide minimum information required to configure a safe and optimal system with photovoltaic inverters. This consolidated version consists of the first edition (2014) and its amendment 1 (2016). Therefore, no need to order amendment in addition to this publication.

What if the SMA PV inverter is not configured for off-grid operation?
