What is PV power plant control (PPC)?

PV power plant control (PPC) PV Power Plant Controller (PPC) is an intelligent vendor-independent system for dynamic PV power plant control and grid code compliance,customizable to satisfy any grid requirement while ensuring interoper- ability with plant SCADA systems.

What is a power plant control for a PV plant?

In ,a power plant control for a PV plant is proposed to accomplish grid code requirements, comparing the operation when the PV plant includes storage support and when it does not. Focusing on the ramp rate control, a model to simulate effective dispatch of energy storage units so as to ensure this requirement is shown in .

How does a PV power plant regulate voltage?

Voltage regulation actions: the PV power plant is required to help maintaining the grid voltage level. A minimum reactive power capability of the PV power plant is established. Additional ancillary equipment, as FACTS devices, can help to reach the capability limits.

What is a power plant control algorithm?

The control algorithm has been designed for a generic PV power plant, where its robustness has permitted it to be implemented in several PV plants (with different devices installed) and to accomplish different grid codes. The power plant control proposed has covered a general and complete approach.

Can a control algorithm be used in a generic PV power plant?

The control algorithm has been designed for a generic PV power plant, where its robustness has permitted it to be implemented in several PV plants (with different devices installed) and to accomplish different grid codes. The PPC proposed has covered a general and complete approach.

What is active and reactive power management in large photovoltaic power plants?

This study proposes an algorithm for active and reactive power management in large photovoltaic (PV) power plants. The algorithm is designed in order to fulfil the requirements of the most demanding grid codes and combines the utilisation of the PV inverters, fixed switched capacitors and static synchronous compensators.
