

How much money did China invest in power grid projects?

During the first four months of this year alone, China invested Rmb122.9bn (\$17bn) in its power grid projects, a 24.9 per cent year-on-year increase. That compares with the \$3.5bn announced last October by US President Joe Biden's administration, which covers 58 projects across 44 states.

Where is State Grid Zhejiang Electric Power Company?

Aerial photo shows technicians of State Grid Zhejiang Electric Power Company checking power transmission lines to make sure the stable operation of local power supply in Zhoushan, east China's Zhejiang Province, Oct. 23, 2020. (Xinhua/Xu Yu)

Why is China's power grid creaking?

China's creaking grid represents a major constraint to progress on its green energy transition. During the first four months of this year alone, China invested Rmb122.9bn (\$17bn) in its power grid projects, a 24.9 per cent year-on-year increase.

Are power grids getting enough attention?

Countries need to adopt more ambitious plans to phase out the fossil fuels causing climate change and back those plans up with the policies and necessary funding to switch to clean energy. The IEA report emphasizes that power grids are a big part of that transition, and yet, grids don't seem to be getting enough attention in that regard.

Will a power limit collapse a regional power grid?

The State Grid was cited by the Beijing News on Sunday as saying that the power limit was first exercised on non-residential usage, but there were still gaps that may cause the collapse of the regional power grid, adding to the residential power shortage. It said the recovery of residential power would be a priority.

Why is Nio testing energy discharges back to local grids?

Due to large-scale power cuts in China caused by record high temperatures limiting the effectiveness of hydro and wind power, NIO has started testing energy discharges back to local grids through its swap stations.
