

Romania has committed in its LTS (Romania's Long-Term Strategy for Reducing Greenhouse Gas Emissions - Neutral Romania in 2050) to an installed wind and solar energy capacity of about 24 GW by 2035, indicating a 5-fold increase compared to the installed wind and solar energy capacities by 2021 (3 GW wind energy and 1.4 GW solar energy ...

o Romania has strengthened its 2030 target for the renewable share of gross final energy consumption. The revised energy and climate strategy plan, published in October, has pushed ...

The Energy Strategy of Romania 2025-2035, with projections up to 2050, is the first strategic document of its kind that the government in Bucharest adopted in 17 years, the Ministry of Energy pointed out.

For Romania to reach its target of 30.7% renewable energy of total consumption by 2030, the Ministry of Energy informs that the country plans to install net capacities of 5.1 GW solar and 5.3 GW wind, i.e., to install additional capacities of 6.9 GW out of renewable sources.

"After 17 years, today we took an essential step: the Government approved the new Energy Strategy of Romania 2025-2035, with the perspective of 2050. It is more than a ...

Romania has committed in its LTS (Romania's Long-Term Strategy for Reducing Greenhouse Gas Emissions - Neutral Romania in 2050) to an installed wind and ...

The Minister of Energy signed, on October 17, two financing contracts through Investment 4.3 and a contract through Investment 4.2 from the National Recovery and ...

o The electricity demand evolution in Romania towards 2030 - update and impact of COVID-19 for the long-term evolution; o New capacity potential for 2030 (retirement, increased demand, repowering etc.) and cost-benefit analysis of available options;

The Energy Strategy of Romania 2025-2035, with projections up to 2050, is the first strategic document of its kind that the government in Bucharest adopted in 17 years, the ...

Workers at the Oltenia Energy Complex (CE Oltenia), one of Romania's largest energy companies primarily involved in coal-based energy production in the southwestern county of Gorj, had the chance earlier this year ...

These projects will contribute to Romania's renewable energy objectives and the European Union's transition to a net-zero economy under the Temporary Crisis and Transition Framework, thereby promoting energy ...

o The electricity demand evolution in Romania towards 2030 - update and impact of COVID-19 for the long-term evolution; o New capacity potential for 2030 (retirement, increased demand, ...

Workers at the Oltenia Energy Complex (CE Oltenia), one of Romania's largest energy companies primarily involved in coal-based energy production in the southwestern county of Gorj, had the chance earlier this year to pursue an 18-day course to become an accredited installer of solar photovoltaic panels.

Workers at the Oltenia Energy Complex (CE Oltenia), one of Romania's largest energy companies primarily involved in coal-based energy production in the southwestern ...

o Romania has strengthened its 2030 target for the renewable share of gross final energy consumption. The revised energy and climate strategy plan, published in October, has pushed the goal up to 38.3%, from 30.7% in the 2019 version. Meeting the new target will require Romania to triple its current onshore wind and solar capacity by 2030.

Today, Romania is one of the most promising markets for renewable energy in Europe. A number of international players have planned or already begun large-scale projects ...
