

Solar dual-phase power generation panel

What is dual-use photovoltaic (PV)?

Dual-use photovoltaic (PV) technologies, also known as dual-use PV, are a type of PV application where the PV panels serve an additional function besides the generation of electricity.

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What is dualsun solar?

Dualsun is the creator of the world's 1st certified hybrid solar panel, manufactured in France, for dual solar production: electricity on the front and hot water on the back. A 2-in-1 innovation. A combination of photovoltaic and thermal solar energy that produces at least 2 times more energy than a conventional photovoltaic panel.

How does a dualsun spring solar panel work?

With its 2-in-1 solar technology, the Dualsun SPRING hybrid panel produces electricity on its front side, then recovers the extra energy to heat circulating water using an innovative heat exchanger on its back side. The water flow in the exchanger has 2 benefits:

What is a dualsun spring panel?

The Dualsun SPRING panel is designed to meet the specific needs of any project. Discover the different solutions combined with the SPRING panel: DualSun SPRING panels are suitable for residential, commercial and industrial buildings. Solar electricity and domestic hot water

Where are dualsun solar panels made?

Made in France, label SPRING technology is designed by Dualsun's engineering teams at the R&D center in Marseille, and manufactured at the Dualsun plant near Lyon. Low carbon. The panel for reducing buildings' carbon footprint, it is designed with high-quality components and follows manufacturing processes that limit CO2 emissions.
