

Solar fish tank circulation storage box

Can you make a fish tank with a spare storage box?

Aquariums and fish tanks can be quite expensive depending on the size and the materials used. However, you can quite easily create your own aquarium using a spare storage box in your house by following the instructions below, saving not only your bank balance, but the earth too!

Can a storage box be turned into an aquarium?

Before you even begin to turn your storage box into an aquarium, you should check whether the box is designed to hold large quantities of water. If the plastic used for your storage box is not strong enough, the risk of water leaking dramatically increases. It's also vital that you check the type of plastic used.

How long does a storage box aquarium take to acclimatise?

This allows the aquarium to settle and stabilises the water temperature. After you have waited for 24 hours, your storage box aquarium should now be ready to use. All that is left to do is to allow your fish to acclimatise to the water and release them in your new aquarium.

What filter should I use in a storage box aquarium?

An ideal filter to use in a storage box aquarium would be a canister filter. This filter is designed to go inside the aquarium and works with any size. Although its primary function is to return cleaned water, the canister filter can also work as a heater as it manages to heat the water when passing through the filter.

How long should a storage box aquarium be left alone?

After your aquarium has been filled with water, gravel, filters, heaters, and decorations, you should leave it alone for 24 hours. This allows the aquarium to settle and stabilises the water temperature. After you have waited for 24 hours, your storage box aquarium should now be ready to use.
