

Solar generator keeps showing yellow light

What does a yellow light on a home standby generator mean?

If the generator is running and supplying power but has a yellow light, it is a maintenance reminder. This indicates that maintenance, such as inspecting the battery or a scheduled maintenance interval, is due but will not prevent the unit from operating. [How Do I Inspect the Battery On My Home Standby Generator?](#)

Why is my Generac Generator Green and yellow?

If you see a partially green and yellow light on your Generac generator, this is simply a suggested maintenance reminder. There is absolutely nothing wrong with your generator, and it will still start automatically and run. These suggested maintenance reminders are time-based, and occur once a certain interval of time has been reached.

How do I know if my generator is not working?

First, turn the machine off. Hit "enter" twice slowly, and then switch the machine back to auto. You should expect to see the yellow light blinking at least once or twice a year. While the yellow light may be a gentle reminder, the red light on your generator indicates that a repair is needed and that the generator isn't working.

What does the yellow light on my Generator mean?

The bright yellow light on your generator is a friendly reminder that you need to have the unit maintained. Your generator has a series of common error codes and light signals that you'll see whenever there is an issue with the machine. Follow these tips on how to maintain your generator and give TriStar Electric a call when you need assistance.

How do I fix a yellow light on my Generator?

Follow these tips on how to maintain your generator and give TriStar Electric a call when you need assistance. If you own a newer generator then the process for clearing the yellow light on your generator should be a simple one. First, turn the machine off. Hit "enter" twice slowly, and then switch the machine back to auto.

What does a green light mean on a generator?

Green (A): The "Ready" status, illuminates when the utility is present and the unit is in auto. This light also flashes when there is an outage and the unit is running. Red (B): The "Alarm" status, illuminates when the generator is OFF or a shutdown alarm is detected. Most alarm codes require an authorized service dealer to address.
