

Spain bioferm energy systems

What is biofermtm technology?

Committed to sustainable and economical organic waste diversion, the BIOFerm™ technology utilizes anaerobic digestion to harness biogas rising from fermenting organics--food waste, manure, biosolids, etc.--converting it into valuable green energy, heat, fuel, and more.

What sets BIOFerm apart?

BIOFerm strives to be the industry leading one-stop shop for turnkey facilities that generate value for waste producers and communities throughout North America*. **Collaboration is essential for success, both internally and with our customers. Honesty is a core value, and we conduct business in an open and transparent manner.

Can natural gas be used in BIOFerm?

Natural gas can only be used to best effect once it is freed of hydrogen sulfide, volatile organic compounds, and siloxanes. This is done by passing it through large adsorbers filled with BIOFerm's activated carbon.

Why should you choose BIOFerm?

Choosing BIOFerm for anaerobic digestion offers you the convenience of a single point of contact and wrapped contracts, as opposed to dealing with multiple contractors and conflicting technologies. Our facilities have integrated programming and similar equipment, ensuring streamlined operations.

Anaerobic digesters and renewable natural gas (RNG) upgrading are two systems that can not only manage waste streams, but also bring many benefits - financial and environmental - to an operation. As an output, digestate can be ...

BIOFerm Energy Systems is a leading provider of turnkey anaerobic digestion and gas upgrading facilities in North America, with over 450 digester installations. BIOFerm is committed to a sustainable energetic and economic transition, waste management, and clean energy creation by harnessing biogas from anaerobic digestion of organics (food ...

BIOFerm has been providing turnkey gas upgrading and anaerobic digestion systems to the North American market since 2007. ... every aspect of the process from conception through commissioning and is committed to providing successful renewable energy projects to their customers. ... Proper feeding & system monitoring is required to avoid system ...

o Operator-friendly control system o Short construction time o Scalable FERMIGMA Plug Flow Technology
