

# Steps to replace the generator belt of Lefeng

How do you adjust a conveyor belt?

The belt moves to the direction where it first touches the pulley. Tighten the snubber roller tension screw on the same side that the belt is moving towards, 1-2 turns at a time. Run the conveyor forward several rotations after each adjustment to observe the impact of the change. Continue adjusting until tracking is maintained.

How to drive a conveyor belt without slippage?

Pollution of pulleys, rollers, the slider bed and the belt itself will increase friction. To drive a conveyor belt without slippage and to track it in a proper way, a certain belt tension is necessary. The tension applied has to be such that there is no slippage on the driving pulley when the belt is started at full load.

How do you adjust a belt tension?

Record this as the STARTING DISTANCE. Tension the belt using the take-up pulley and let it turn a few times to equally divide the belt tension over the belt. Adjust the pulley in small increments, ensuring it remains square to the frame as the belt is stretched.

How do you adjust a belt snubber?

Continue adjusting until tracking is maintained. Tighten the snubber roller tension screw on the same side that the belt is moving towards, 1-2 turns at a time. Run the conveyor forward several rotations after each adjustment to observe the impact of the change. Continue adjusting until tracking is maintained.

How do you maintain a conveyor belt?

Use provided drawings as a reference to ensure the belt is routed along the correct path. Tighten all butt couplings and support mounting bolts to prevent conveyor frame movement. Ensure all adjustable pulleys and rollers are perpendicular to the conveyor frame and their axes are parallel. This will allow consistent tracking adjustments to be made.

How do I know if my generator is working properly?

If your business relies on your generator to function, you need to stay on top of these daily checks: Checking and refilling the fuel. Checking and refilling the engine oil. Check for oil leaks. Check and tighten fastening parts. Also check your generator's general appearance.
