In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society. Demand grew by roughly 7.5% per year during this decade, fueled by the expansion of Syria's industrial and service sectors, the spread of energy-intensive home appliances, and state policies (i.e. high subsidies and low tariffs) that encouraged wasteful energy practices. Syria's inefficient transmission infrastructure compounded these probl...

Several factors have contributed to Syria's accelerated transition to renewable energy. First, the war has severely damaged traditional energy infrastructure, driving local communities to seek sustainable alternatives. Second, displacement has put pressure on host communities, increasing the demand for electricity.
