

The proportion of solar power generation in the United States

What percentage of US electricity is generated by solar power?

According to our Electric Power Annual, solar power accounted for 3% of U.S. electricity generation from all sources in 2020. In our Short-Term Energy Outlook, we forecast that solar will account for 4% of U.S. electricity generation in 2021 and 5% in 2022.

How many terawatt-hours does solar power generate a year?

In 2023, utility-scale solar power generated 164.5 terawatt-hours (TWh), or 3.9% of electricity in the United States. Total solar generation that year, including estimated small-scale photovoltaic generation, was 238 TWh.

How much electricity is generated by solar photovoltaic systems?

EIA estimates that about 0.07 trillion kWh of electricity were generated with small-scale solar photovoltaic systems. Biomass was the source of about 1% of total U.S. utility-scale electricity generation and accounted for 5% of the utility-scale electricity generation from renewable sources in 2023.

Which states generate the most solar power in 2023?

The most solar power generation came from California (68,816 GWh) and Texas (31,739 GWh) in 2023. Texas also led the country in power generated from wind (119,836 GWh). These data -- combined with federal capacity forecasts -- show how renewable energy growth is driving America's progress toward net-zero carbon emissions targets in the U.S.

How many kilowatthours are generated by solar power?

In 2023, net generation of electricity from utility-scale generators in the United States was about 4,178 billion kilowatthours (kWh) (or about 4.18 trillion kWh). EIA estimates that an additional 73.62 billion kWh (or about 0.07 trillion kWh) were generated with small-scale solar photovoltaic (PV) systems.

How much solar energy does the United States use?

The SEIA report tallies all types of solar energy, and in 2007 the United States installed 342 MW of solar photovoltaic (PV) electric power, 139 thermal megawatts (MW th) of solar water heating, 762 MW th of pool heating, and 21 MW th of solar space heating and cooling.

Solar PV and onshore wind additions through 2028 is expected to more than double in the United States, the European Union, India and Brazil compared with the last five years. Supportive policy environments and the improving ...

Solar panels on a rooftop in New York City Community solar farm in the town of Wheatland, Wisconsin [1]. Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community ...

The proportion of solar power generation in the United States

Solar photovoltaic (PV) systems now account for the highest proportion of new electric power generation capacity in the United States (Figure 1).¹ Domestic solar power ...

Projection of the electric power sector's solar photovoltaic consumption* in the U.S. from 2022 to 2050 (in quadrillion British thermal units) Find up-to-date statistics and facts on the...

What is U.S. electricity generation by energy source? In 2023, about 4,178 billion kilowatthours (kWh) (or about 4.18 trillion kWh) of electricity were generated at utility-scale electricity ...

The International Energy Agency (IEA) reported that the United States installed 15.6 GW ac of solar capacity in in the first quarter (Q1)/second quarter (Q2) of 2024 (the Solar Energy ...

Utility-scale solar generation (from projects greater than 1 megawatt) increased 26%, and small-scale solar, such as grid-connected rooftop solar panels, increased 19%. Coal ...

California and Nevada were the states with the highest percentage of solar in their electricity generation, with 28.2 and 25.9 percent, respectively. ... in the United States ...

In 2022, residential solar panels generated 37 million megawatt-hours, accounting for 18% of all solar energy in the US, according to the Energy Information Administration. The average US home uses about 11,000 kilowatt ...

The United States' percentage of electricity generated from solar energy decreased 1.6% from July to August. Solar energy production increased 28.3% nationwide from August 2023 to August 2024. The following ...

The number of small-scale solar photovoltaic (PV) systems, such as those on rooftops, has grown significantly in the United States over the past several years. Estimates of ...

This is a list of U.S. states by total electricity generation, percent of generation that is renewable, total renewable generation, percent of total domestic renewable generation, [1] and carbon ...

But several other states have developed far larger shares of renewable capacity within their utility-scale generation systems, and so draw a greater proportion of clean power in ...

In the United States, most renewable electricity generation comes from hydropower, solar, and wind. Generation from renewable energy sources has grown rapidly as ...

Nuclear energy production in commercial nuclear power plants in the United States began in 1957, grew each year through 1990 as the number of nuclear power plants ...

The proportion of solar power generation in the United States

According to our Electric Power Annual, solar power accounted for 3% of U.S. electricity generation from all sources in 2020. In our Short-Term Energy Outlook, we forecast that solar will account for 4% of U.S. ...
