The SCADA system can control the batteries by interfacing directly with the BMS or with any combination of BMS, DC-DC converters, and inverters, depending on the type of system. From the HMI, operators can issue stop/start commands, charging/discharging commands, and parameters for the BMS to operate within, including real/reactive power ...

The Government of Timor-Leste intends to replace part of this high-cost generation by more cost-efficient solar power. As almost the whole territory of Timor-Leste has the potential to successfully generate solar energy, the Government is keen to tap into this potential to setup utility scale solar plants as well as off-grid lighting solutions ...

A mathematical model to optimize the size of the BESS, which minimises the energy exchange with the utility grid is introduced. A case study conducted on residential customer demonstrates that the proposed approach is a valuable tool for BESS design.

Timor-Leste (GoTL) has opened the telecommunications market to competition, establishing a new independent regulatory body and introducing a universal service policy that is expected to further improve access to affordable, reliable, and modern telecommunications services.

Our patented automated data enrichment feature in OneView &#174; SCADA, the Robotic Data Intelligence, allows you to clean, normalize, and correct data automatically. It acquires raw data from the power plants and uses smart algorithms to create virtual events to cover missing events automatically. The cleaned and corrected data can then be ...
