

Do you have a network storage in your home? Like a QNAP or Synology NAS? This release adds the ability to add and use that storage with Home Assistant! This long and highly requested feature is now available when running the Home Assistant Operating System.

Regular backups are crucial to protect your configuration, automations and integrations from data loss. This article introduces various backup options for Home Assistant, including the use of network-attached storage (NAS), the Google Drive backup plugin and virtual machine (VM) backup when Home Assistant is virtualized as a VM.

I've defined a new network storage for backup using Samba to my NAS. How can I check if it's working? So from now on all the backup will be stored on network storage instead of local backup folder? Will this work with ...

My Home Assistant storage is regularly full, so I have to delete some backups to continue using it. My first thought was that frigate was using most of the space, but after deleting all of the clips, snapshots and recordings my storage is still 90% full. According to frigate the "recording & snapshots" location is using 103GB+.

My Home Assistant storage is regularly full, so I have to delete some backups to continue using it. My first thought was that frigate was using most of the space, but after ...

I would start with installing add on Samba, FTP or terminal and check the folder sizes, so you can see where the storage is being consumed. You can also install the system ...

Home Assistant: Ultimate Backup Guide. Home Assistant: Ultimate Restore Guide. Both use the awesome @sabeechen Google Drive Backup add-on in combination with NAS storage.

I have no problems following the online instructions and setting up an external storage on my NAS (mounted as &quot;Frigate&quot; in the root of my NAS). Two folders are created (Clips and Recordings) and all detected events and recordings are present.

I've defined a new network storage for backup using Samba to my NAS. How can I check if it's working? So from now on all the backup will be stored on network storage instead of local backup folder? Will this work with addon like "Home Assistant Google Drive Backup" that have retention of local and GDrive backups?  
Thanks

I would start with installing add on Samba, FTP or terminal and check the folder sizes, so you can see where

the storage is being consumed. You can also install the system sensors, but that is just to alert, not to solve the issue.

Home Assistant Cloud is a subscription service provided by our partner Nabu Casa, Inc. Check out their website for more information on features, pricing and how to configure Home Assistant. Help us improve our documentation
