

What is a wearable e-textile microgrid system?

Inspired by this notion, we herein propose and demonstrate the concept of a wearable e-textile microgrid system: a multi-module, textile-based system with applications powered by complementary and synergistic energy harvesters and commensurate energy storage modules.

What is wearable bioenergy microgrid?

In summary, we have demonstrated the concept of wearable bioenergy microgrid via a textile-based multi-module system for sequentially harvesting biomechanical and biochemical energy via the TEG and BFC modules.

What is a wearable microgrid?

This Perspective discusses the vision of a wearable microgrid, based on a judicious scenario-specific selection of harvesting and storage modules, with commensurate performance, towards the rational design of practical wearable electronic systems with high energy autonomy and reliability.

Can wearable energy systems inspire microgrid design and deployment?

In this regard, wearable energy systems can seek inspiration in the design and deployment of microgrids operating in "island mode" [31–33].

What is a microgrid e-textile system?

Implementing the "complementary, commensurate, compatible" design principles, the microgrid e-textile system serves as an attractive example for future integrated on-body systems that are autonomous, reliable, synergistic, sustainable and energy-efficient.

What is the integrated fingertip-wearable microgrid system?

The integrated fingertip-wearable microgrid system offers a sustainable autonomous power supply, miniaturization, self-regulation, on-demand multisensory biomarker detection, safety and comfortable wearability.

microgrid relies on the careful selection of components with compatible performance and complementary characteristics. Inspired by this notion, we herein propose and demonstrate

The integrated fingertip-wearable microgrid system offers a sustainable autonomous power supply, miniaturization, self-regulation, on-demand multisensory biomarker ...

Here, we report an autonomous and continuous sweat sensing system that operates on a fingertip. The system uses a self-voltage-regulated wearable microgrid based on enzymatic ...

Implementing "compatible form factors, commensurate performance, and complementary functionality" design principles, the flexible, textile-based bioenergy microgrid ...

Implementing "compatible form factors, commensurate performance, and complementary functionality" design principles, the flexible, textile-based bioenergy microgrid offers attractive prospects ...

Here, we report an autonomous and continuous sweat sensing system that operates on a fingertip. The system uses a self-voltage-regulated wearable microgrid based on enzymatic biofuel cells and AgCl-Zn batteries to harvest and store bioenergy from sweat, r

A wearable microgrid powered solely by fingertip perspiration can monitor metabolic biomarkers over extended periods of time. Wearable health monitoring platforms ...
