What is solar energy used for?

Solar energy is being used to power the vehicles and for domestic purposes such as space heating and cooking. The most exciting possibility for solar energy is satellite power station that will be transmitting electrical energy from the solar panels in space to Earth via microwave beams.

How can solar energy be used to generate electricity?

Sun is an inexhaustible source of energy capable of fulfilling all the energy needs of humankind. The energy from the sun can be converted into electricity or used directly. Electricity can be generated from solar energy either directly using photovoltaic (PV) cells or indirectly using concentrated solar power (CSP) technology.

What are the main features of solar photovoltaic (PV) generation?

Abstract: This chapter presents the important features of solar photovoltaic (PV) generation and an overview of electrical storage technologies. The basic unit of a solar PV generation system is a solar cell, which is a P-N junction diode. The power electronic converters used in solar systems are usually DC-DC converters and DC-AC converters.

How can solar energy be used worldwide?

Installation capacity of solar energy worldwide. Energy can be obtained directly from the Sun--so-called solar energy. Globally,there has been growth in solar energy applications, as it can be used to generate electricity, desalinate water and generate heat, etc.

What is the contribution of solar energy to global electricity production?

While the contribution of solar energy to global electricity production remains generally low at 3.6%, it has firmly established itself among other renewable energy technologies, comprising nearly 31% of the total installed renewable energy capacity in 2022 (IRENA, 2023).

What are the different types of solar energy technology?

Based on that,after many years of research and development from scientists worldwide,solar energy technology is classified into two key applications: solar thermal and solar PV. PV systems convert the Sun's energy into electricity by utilizing solar panels.
